

Rocky Mountain Bio Products supplies natural, organic, plant-based products for all types of soils and growing environments. Our products can be used independently or in conjunction with each other to “fix dirt” by turning your dirt into productive soil, improving seed germination & plant growth.

Whether you need to fix dirt or grow soil, our products are
“Your prescription for richer soils and a healthier landscape.”

- Reclamation
- Landscaping
- Post-Fire Revegetation
- Tree & Shrubs
- Revegetation
- Gardening
- Turf & Native Grass
- Golf Courses

PRODUCTS & SOLUTIONS

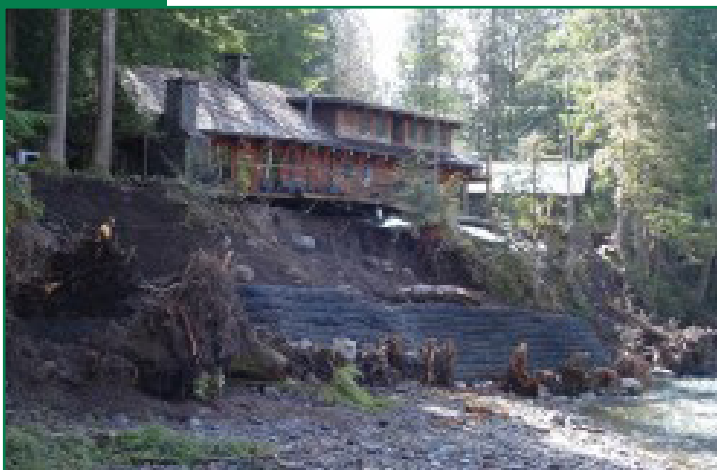

Biosol – All Purpose Long-Lasting Natural Organic Fertilizer

Biosol Forte is a fermented, plant-based organic fertilizer and soil amendment. Biosol Forte 7-2-1 is a complex, stable multi-nutrient fertilizer high in organic matter, carbon, chitin, and dry mycelium. The high chitin content (5 –15%) in Biosol is a vital substance for supporting healthy soil and plant life by reducing soil-borne pathogens and diseases. Dry mycelium, the beneficial proteins contained in Biosol, will be available during multiple growing seasons (non-irrigated) to enhance soil life and establish a better soil structure. This slow uniform nutrient release mimics the natural growing cycle of plants, making nutrients naturally available for root absorption, promoting a healthy balance of beneficial microbes, and ensuring the long-term health of your soil and plants.

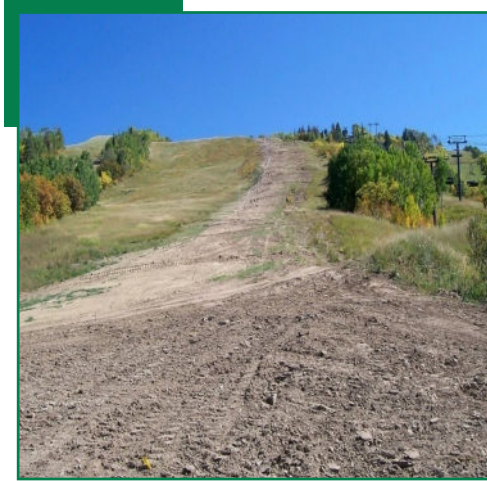

PermaMatrix – BSA-Hydro [Biotic Soil Amendment]

Initiates the development of healthy soil through a combination of the essential elements that make up the life-supporting organic matter of robust topsoil. It reintroduces stable organics, beneficial micro-organisms, organic acids, and mycorrhizal fungi to rebuild/establish healthy productive soils. These microbiological elements work together to re-establish soil life for seed germination and vegetation on sites that have been disturbed by natural or man-made events. It is a stable carbon-rich soil amendment developed by soil scientists for depleted soils. Manufactured in the United States.

Menefee Humate – All Natural Trace Mineral

Menefee Humate is a granular humic acid-based soil conditioner that acts as an organic chelator and microbial stimulator that is a high source of organic carbon. This unique carbon matrix incorporates a high concentration of trace minerals and organic acids, specifically humic acid, improving the plant's ability to take in vital nutrients. Menefee Humate has the highest guaranteed level of combined humic acid, organic matter, and carbon available on the market. Humate will significantly improve poor soils and water-holding capacity when combined with a balanced fertilization program.

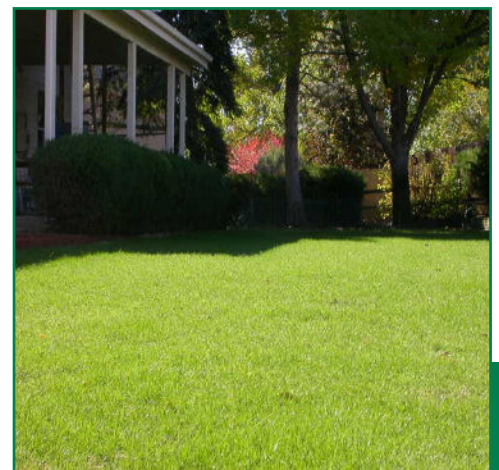

Mycorrhizae

MycoApply's Endo and Ecto mycorrhizae options consist of specifically selected species of fungi and bacteria in multiple formulations designed for a wide variety of uses. Mycorrhizae fungi release powerful enzymes into the soil that retrieve hard-to-capture nutrients, such as organic nitrogen, phosphorus, iron and other "tightly bound" soil nutrients. These beneficial fungi build a natural microbial system that enhances plant growth, yields, and tolerance to environmental extremes.

Seed Mixes

We supply stock seed mixes along with custom mixes for your projects. From native seed to turf seed to wildflowers, we have a variety of seed mixes available. Let us know if you are looking for DOT, State, City or County seed mix or customized seed mix for your project. We can provide the right seed for your site's conditions and requirements to ensure the best vegetation solution.

Planter's Kit

The Rocky Mountain USA Planter's Kit is a premier fertilizer and soil amendment product for planting and transplanting new plants. The planter's kit will increase root mass and strengthen the roots, allowing plants to maximize water and nutrient intake while reducing transplant shock. Combining Biosol Forte, Menefee Humate and MycoApply Endo / Ecto Granular Mycorrhizae intensifies the benefits of each product, allowing the soil and plants to retain more moisture. The result is a healthier, deep-rooted plant that requires less water to thrive.

Benefits of the RMBP Planter's Kit

- Provides all macro and micro-nutrients needed for healthy plants
- Provides stable organic matter
- Benefits entire landscape including trees, shrubs, flowers, and grass
- Reduces transplant loss and warranty replacement
- Increases plant roots 100 – 1,000 times
- Saves water

Other Supportive Products

- Aquasorb – Anionic Water Retaining Polymers
- Tackifiers – Plant Based Organic Tackifiers for Hydroseeding

All our products are beneficial for soil structure, soil life, soil health, plant growth and plant health. These products are field and laboratory-tested and have achieved award-winning results around the world in some of the world's worst soil. We can help increase your project's vegetation success with our all-natural, organic biosolutions.

Contact us for revegetation assistance in any climate or condition.
